RESONESSENCE LABS TO START SHIPPING OUR VERY LATEST AUDIO DAC WHICH FEATURES THE
ESS PRO SERIES SABRE DAC CHIP

Resonessence Labs are proud to announce that their latest Audio DAC product, VERITAS will start shipping within the next 4 – 5 weeks. The company has secured an early release of the ES9028PRO series chip however quantities are limited. In celebration of the fact that we are the first company to introduce a product that has the PRO series Sabre chip at its core we are offering a choice of three colors, Black, Silver and Gold. Each unit is machined out of a solid block of Aluminum.

A note about the ES9028PRO Sabre chips: What is so special about the SABRE PRO series DAC chips? Put simply they sound phenomenal and it's all down to the inclusion of the newest generation of the ESS Hyperstream II technology.

VERITAS will be on show at AXPONA in Chicago this month and at Musikmesse in Frankfurt Germany.

VERITAS includes all the features our customers have come to expect: USB Audio 2.0, DSD and DXD, XLR outputs, RCA outputs, Optical input and more. Remote control for track selection, programmable on-the-fly filters - all the technology introduced by Resonessence in our award-winning products. VERITAS has outstanding DNR and THD, but this time it is about the sound. There is no specification we can mention that communicates the remarkable sound of this device.

Mark Mallinson,

President Resonessence Labs
